1. *Support for listed databases is independent of the operating system where the database resides, unless otherwise noted.*
2. *Hyperion Intelligence is a 32-bit application, and supports 32-bit versions of connectivity software. It is valid to use a 32-bit connectivity solution to interoperate with a 64-bit database, but native use of 64-bit connectivity is not supported.*
3. *ODBC and OLEDB support are to the Microsoft standards level. While any ODBC or OLEDB driver should work correctly with Hyperion Intelligence, there are sometimes differences in driver vendor implementations. Hyperion will make a reasonable effort to address issues with drivers that perform according to the standards. For drivers that do not function per the standards, Hyperion may elect to not pursue a resolution.*
